WTZ-Montagsseminar

“Damage Tolerance of the Genome and Epigenome in Tumour Suppression”

Ivano Amelio, PhD

Carl Zeiss Endowed Professor
and Chair for Systems Toxicology,
University of Konstanz

Ivano's research explores the transcriptional and epigenetic mechanisms that regulate cellular responses to stress, with a particular focus on how these processes impact tumorigenesis through tumor-suppressive pathways. His significant contributions include work on **p53/p73's** role in **metabolic regulation**, the **hypoxia response** and **developmental processes**. <https://pubmed.ncbi.nlm.nih.gov/>

Since 2018, Ivano has served as Editor-in-Chief of *Cell Death Discovery* (Springer-Nature) and in 2023 joined the editorial board of *Cell Death & Differentiation*. Currently, he is the President-Elect of the European Cell Death Organisation (ECDO) and board member.

You are cordially invited to join us on:

Monday, 07.07.2025, 4 pm

Seminar room, ground floor, WTZ-Stationenhaus

Host: Dr. med. Halime Kalkavan
