German Cancer  
Consortium

TranslaTUM

# DKTK/TranslaTUM Minisymposium

June 12, 15:00 – 17:00

Johannes B. Ortnr Forum (Auditorium right part)

Speaker

## **Peter Bailey: The big and small of extrachromosomal circular DNAs in PDAC**

Botton-Champalimaud Pancreatic Cancer Center, Lisbon

## **Günter Schneider: Targets and Rational Therapies for GI-cancer**

University Medical Center Göttingen

**Peter Bailey** is Director of Translational Research at the Botton-Champalimaud Pancreatic Cancer Centre, Lisbon, Portugal. Peter completed his PhD in Molecular Biology at the University of Queensland, Australia and has worked at several leading universities including Harvard Medical School, Karolinska Institute and University of Glasgow. He has expertise in the fields of translational genomics and cancer systems biology and has published on the classification and molecular characterisation of pancreatic cancer.

**Günter Schneider** is a physician-scientist and W3 Professor of Translational Cancer Research at the University Medical Center Göttingen (UMG). His laboratory aims to understand the molecular mechanisms that control therapeutic vulnerabilities of gastrointestinal cancers to bridge preclinical and clinical cancer research and improve the prognosis of cancer patients. He has authored influential studies on pancreatic, intestinal and biliary tract cancers and identified new genetic and epigenetic targets for therapy.

Host

Dieter Saur, Division of Translational Cancer Research, German Cancer Research Center, Heidelberg Institute of Experimental Cancer Therapy, DKTK partner site Munich and TranslaTUM, Technical University of Munich
